My Quality Assurance Process

PHASE 01

Requirement Analysis

Collaborating with product owners to define acceptance criteria and identify critical test scenarios before a single line of code is written.

PHASE 02

Test Strategy & Planning

Designing comprehensive test strategies, selecting automation frameworks (Playwright, Selenium), and building robust test data environments.

PHASE 03

Execution & Automation

Running parallelized suites across browsers and devices, catching regressions early through continuous integration gates in CI/CD.

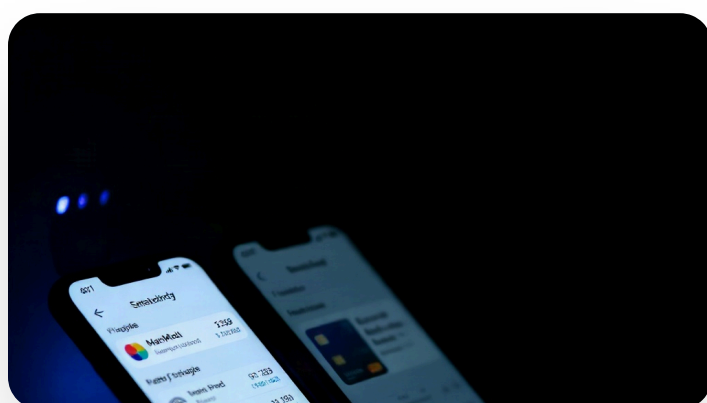

PHASE 04

Quality Intelligence

Delivering clear, actionable quality reports with coverage metrics, performance benchmarks, and risk assessments to stakeholders.

Selected Work

Featured Projects

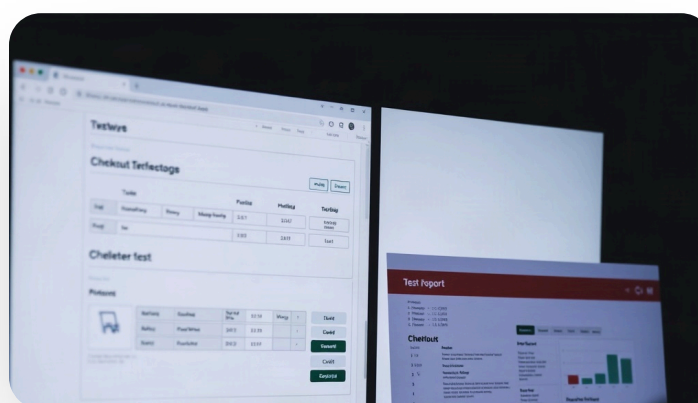

FinTech Mobile App

Reduced regression time by 60% using Playwright

Enterprise SaaS Platform

99.9% uptime validation under peak load

E-Commerce Checkout

Zero-critical-leak production deploy

Tools of the Trade

Technical Arsenal

Automation

Playwright Cypress Selenium Appium

Languages

TypeScript Python Java Shell

API & Performance

Postman k6 JMeter REST-assured

Infrastructure

Docker AWS Kubernetes Terraform

CI/CD & Ops

GitHub Actions Jenkins GitLab CI Datadog

Management

Jira TestRail Zephyr Confluence
